**Keywords:** Energy supply, Energy demand, Macedonia, SWOT analysis.  

**ABSTRACT**  
In this study energy circumstance of Macedonia was analyzed in order to evaluation for security of energy supply. Firstly, energy resources and power plants were investigated and tabulated. SWOT analysis applied with strengths, weaknesses, opportunities and threats (SWOT) concepts which were written for the country regarding geographical and strategical position, energy resources and economical situation of the country. As known that, SWOT analysis may be used in decision-making situation when a desired end-state (objective) has been defined. Internal and external analysis applied and some suggestions composed as the conclude evaluation of SWOT analysis for Macedonia energy analysis.
