Life-time welfare improvement is one of the objectives of humankind. Therefore, primary objectives of economic development focus on solving problems about accommodation, nutrition, education, health, clean water, energy, working conditions, etc. to provide a better life for humans. In this century, information and communication technologies are rapidly developing. One of the most significant impacts of information technologies is making countries dependent to each other. For that reason, most of the countries are continuously interacting with all or some countries in economic, political, social, cultural, military, etc. fields. In this context, this paper will discuss the dynamics of knowledge society transformation in sustainable economic development process, in details.

Keywords: Sustainable Economic Development, Knowledge Society, Information and Communication Technologies, Economic Development, Economy.
